

**The International Treaty**  
ON PLANT GENETIC RESOURCES  
FOR FOOD AND AGRICULTURE

Food and Agriculture  
Organization of the  
United Nations

# Digital Object Identifiers (DOIs) for Plant Genetic Resources and the Global Information System (GLIS) of the ITPGRFA

*Marco Marsella*

[www.fao.org/plant-treaty](http://www.fao.org/plant-treaty)

# Background

- **The International Treaty on Plant Genetic Resources for Food and Agriculture (ITPGRFA)**
  - Promotes conservation and sustainable use of all Plant Genetic Resources for Food and Agriculture and the fair and equitable sharing of the benefits arising out of their use
  - Facilitates access to PGRFA as well as to associated information
  - Established in 2004
  - 144 contracting parties

## Article 17 of the Treaty

“The Contracting Parties shall cooperate to develop and strengthen a **global information system (GLIS)** to facilitate the exchange of information, **based on existing information systems**, on scientific, technical and environmental matters related to plant genetic resources for food and agriculture...”

# The SMTA

- Regulates the exchange of PGRFA in the Treaty framework
- Also regulates the exchange of information associated to the PGRFA
- Provider's obligation:
  - All available passport data and, subject to applicable law, any other associated available non-confidential descriptive information, shall be made available with the Plant Genetic Resources for Food and Agriculture provided
- Recipient's obligation:
  - The Recipient shall make available to the Multilateral System, through the information system provided for in Article 17 of the Treaty, all non-confidential information that results from research and development carried out on the Material

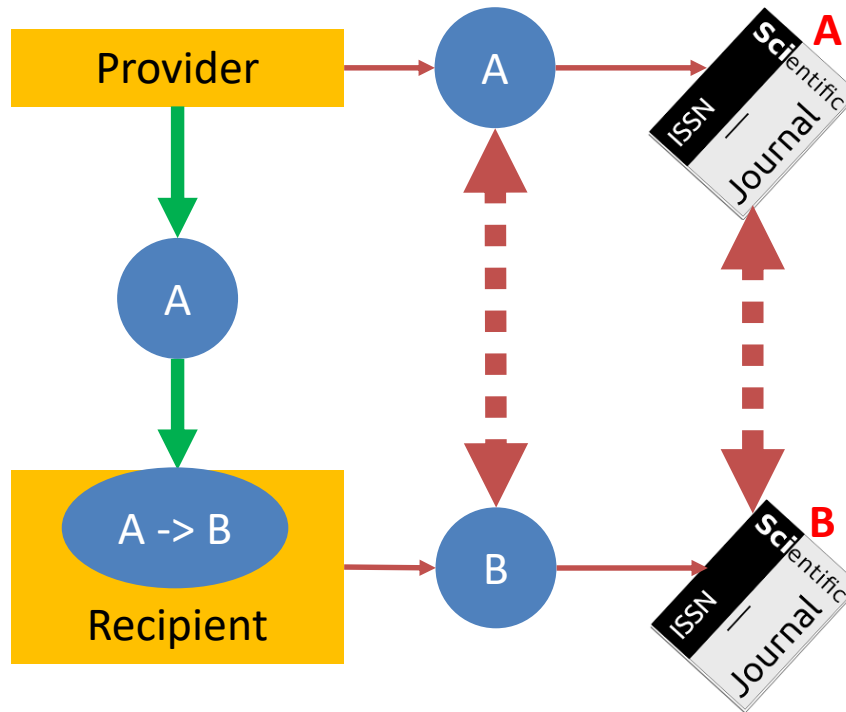

**Information = benefit**

## Why DOIs?

- Accurate identification of the PGR is critical for scientific research and reliable information dissemination
- Each PGR user community has established its own independent standards for identification
- All communities agree on the importance of a common system of Permanent Unique Identifiers
- DOIs have been selected after consultation with experts from many countries and diverse backgrounds

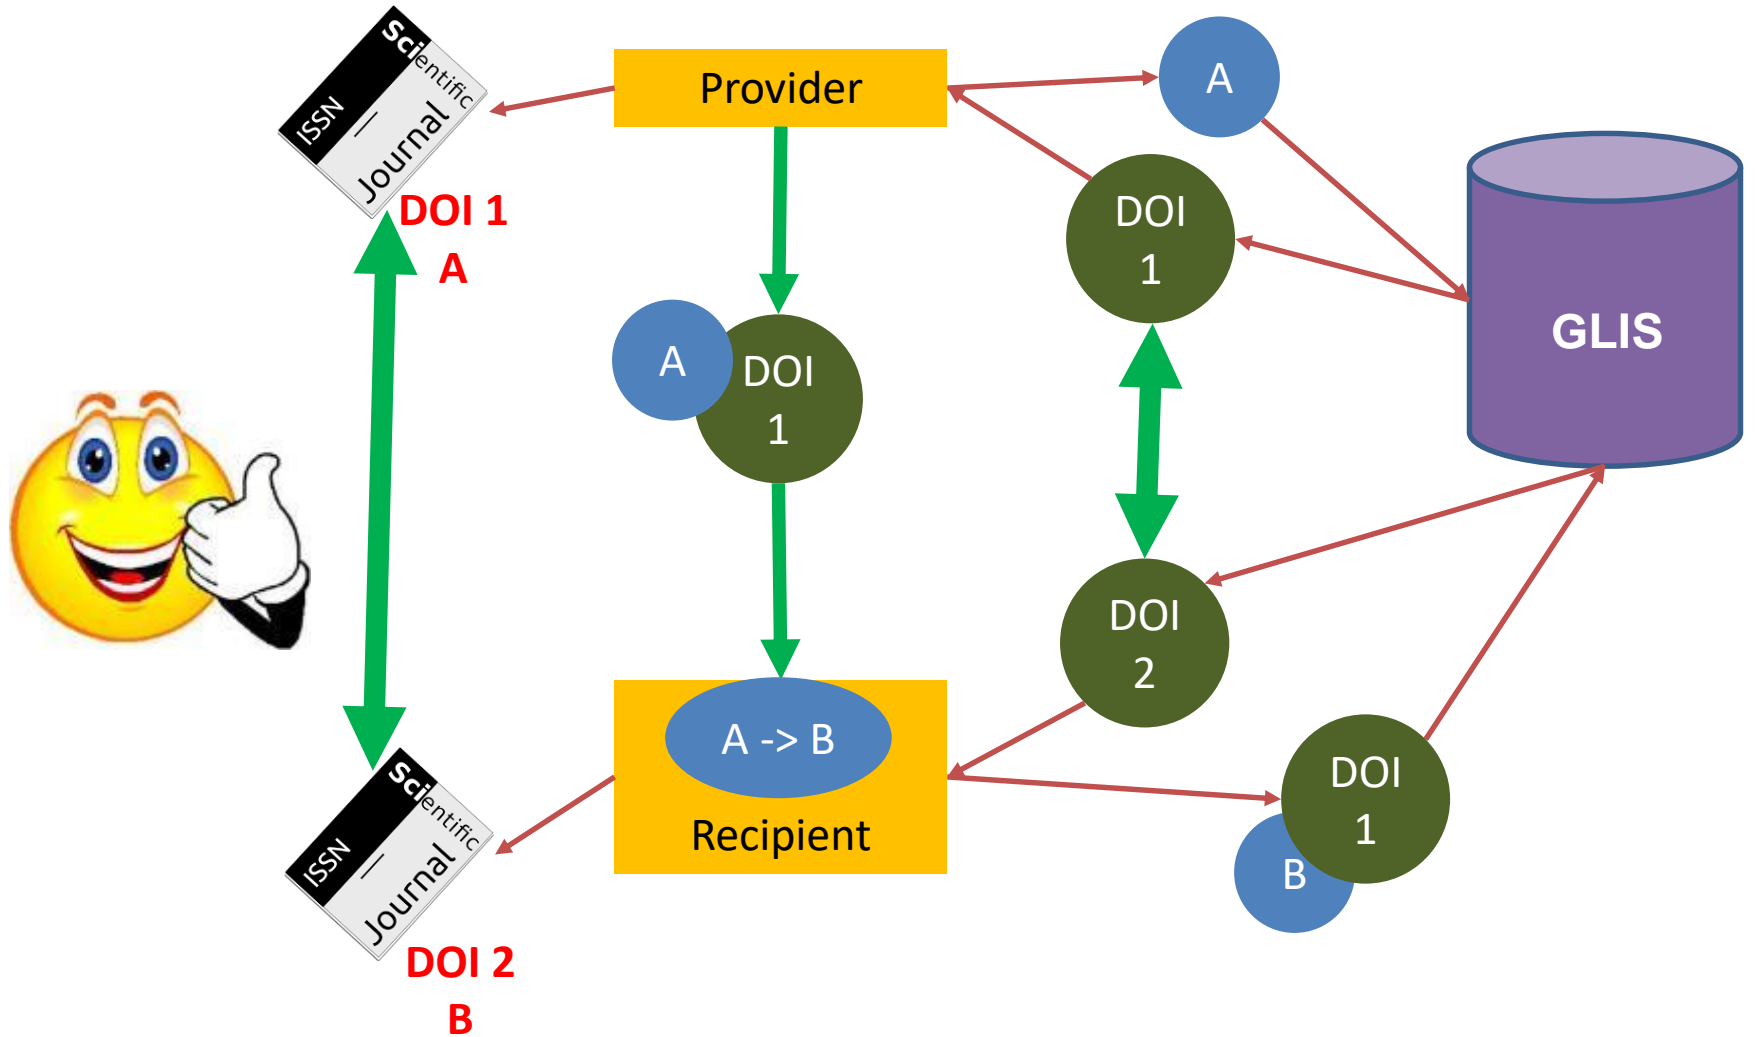

# What happens now

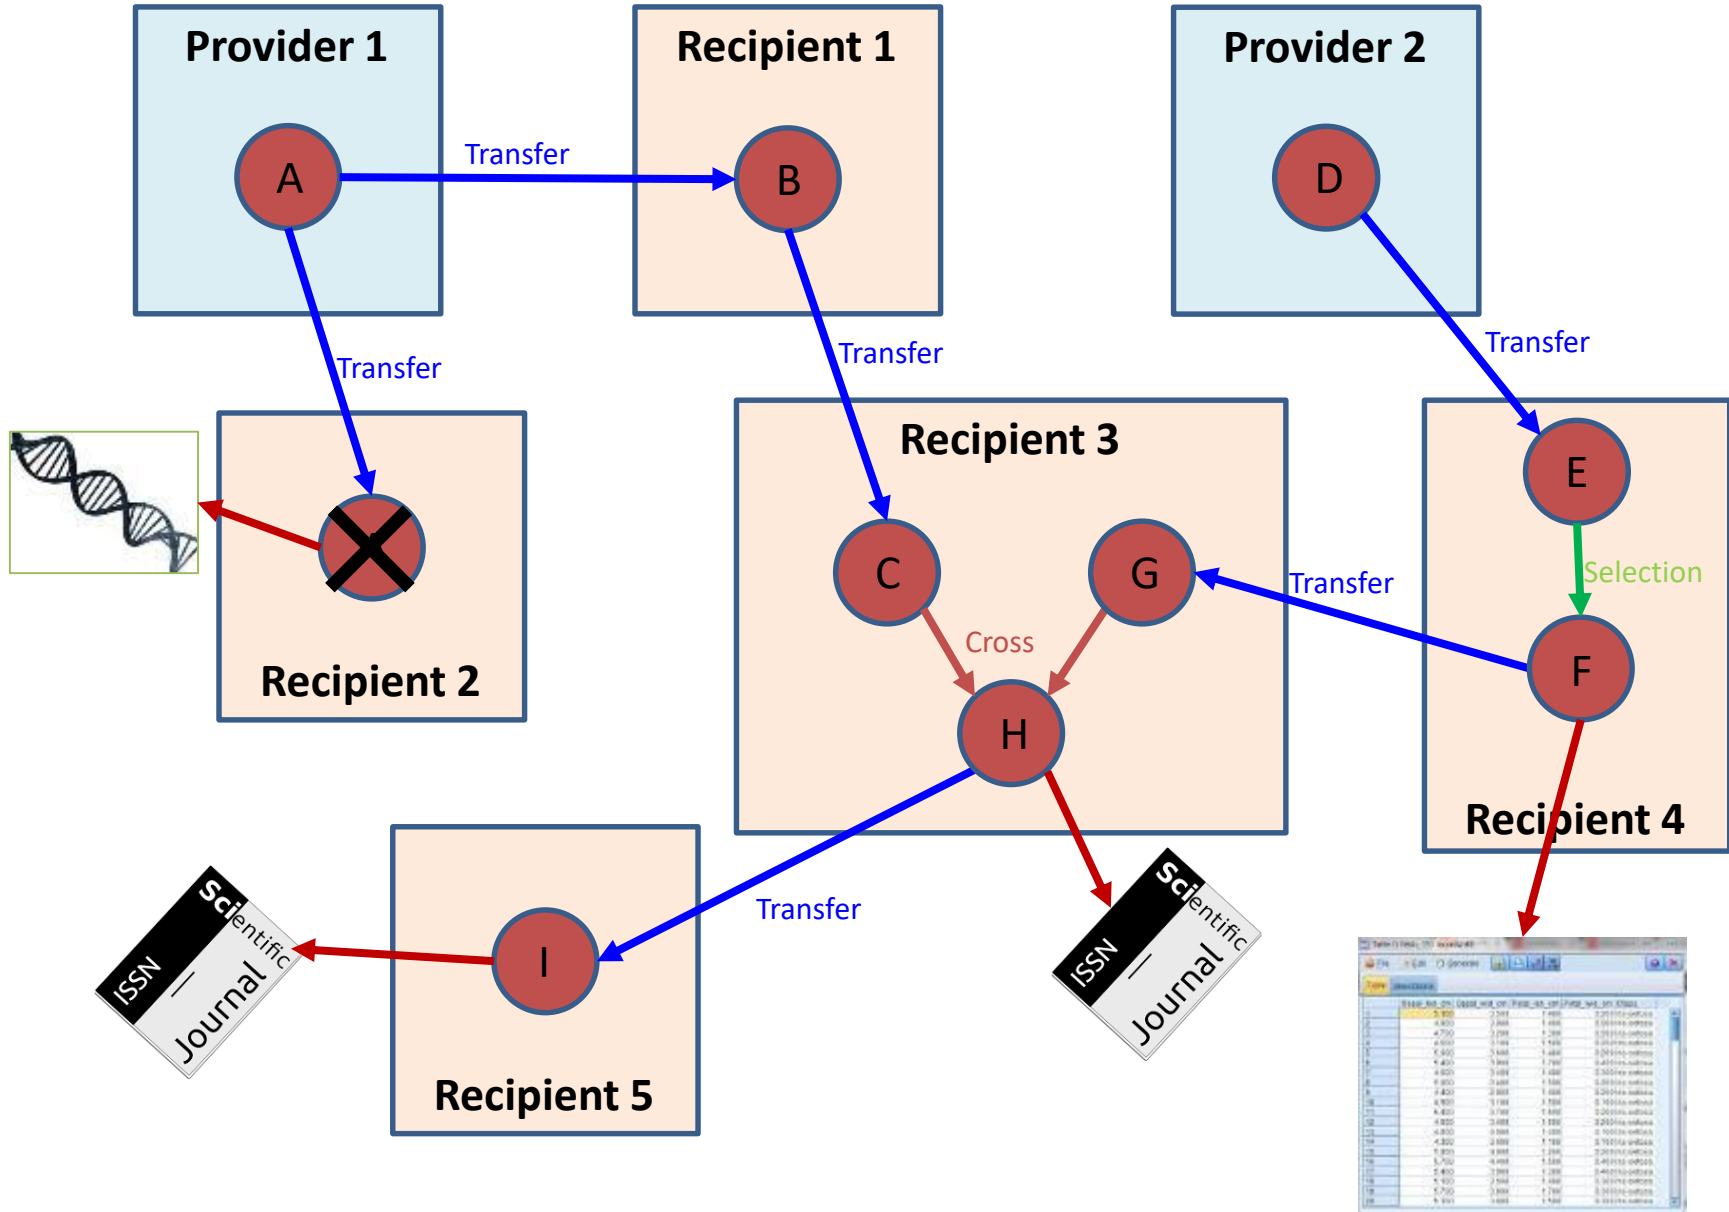

A = Genetic resource sample  
B = Genetic resource sample  
Provider = Breeder, Curator  
Recipient = Genebank

# How GLIS and DOIs will help

A = Genetic resource sample  
B = Genetic resource sample  
GLIS = Global Information System

# Assigning DOIs to PGRFAs

- What is the DOI associated to?
  - Physical material, not its description
  - Holder of the material
- Descriptors
  - Based on Multi Crop Passport Descriptors with some extensions
  - **Mandatory:** Holder, species, method, date, local identifier
  - **Recommended:** Biological status, links to web resources, etc.
  - **Additional:** Information on collecting, breeding, etc.

# The Global Information System (GLIS)

- Identify PGRFA through Digital Object Identifiers (DOIs)
- Store basic information on PGRFA to support discovery and resolution
- Collect links to web systems where detailed information can be found
- Promote standards and formats to facilitate interoperability and data sharing among systems
- Promote “blessed” systems to facilitate participation
- Capacity building and data quality improvement

# Services offered by GLIS

- Relationships among PGRFAs

# Services offered by GLIS

- HasMetadata expansion
  - [Allows access to full set of descriptors in XML](#)
- Descriptors in multiple formats (Content Negotiation)
  - [XML](#)
  - [JSON](#)
  - [JSON-LD](#)
  - [Darwin Core-Archive](#)
  - [brAPI](#)
- EventData
  - [GLIS will automatically provide links to publications citing the current PGRFA's DOI](#)

# GLIS for the user community

- Free-of-charge DOI minting
  - The cost is covered by the Treaty Secretariat
- The International Treaty is Member of DataCite
  - The GLIS user community is represented
- Support for GLIS users
  - Advice on adoption of DOIs
  - Integration Toolkit
  - Published formats and protocols to interoperate with GLIS

# How you can register DOIs using GLIS

- Web form
  - For small collections or for *ad-hoc* updates
- Excel or tab-delimited batch files
  - For medium size collections or as a stop-gap solution
- XML-based protocol
  - For large collections and real-time integration

# Thank you!
